Plagues

Smallpox
Spread throughout the world, contagious and out of control
In 1977, virus was wiped out completely
2002 government ordered smallpox vaccines for the entire world

Ebola
Spread by eating animals
Their symptoms started with headaches, entire body starts aching,
Internal organs and skin bed and they vomited blood
We can't stop this disease because it has no cure

Black Death
Spread by fleas and rats
Started off by an earthquake and woke up a virus in the sea
Symptoms are:
First started with a headache, nausea,
Pain and lymph nodes swelled to the size of eggs
We can stop with a genetic mutation named Delta 32
